

Rescheduled Event Notice - Glenmoriston Substation Access Track Upgrade

Please note:

- This is a rescheduled event as our consultation on 01 October was cancelled due to unforeseen circumstances. We apologise again for any inconvenience this may have caused.
- Following feedback, we have secured an alternative venue for the event, The Hub - Dalchreichart, located in closer proximity to our proposals.

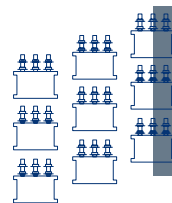

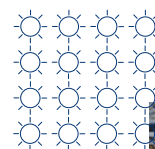

SSEN Transmission invites local residents and stakeholders to a public consultation event regarding proposed improvement works to the access track leading to the Glenmoriston Substation site.

The proposed development involves upgrading the existing track from Torgyle to the Glenmoriston Substation, continuing along Inverwick Road until it rejoins the A887, approximately 6km west of Invermoriston. These upgrades are essential to support the delivery of a new grid transformer to the substation.

While the transformer replacement itself is not part of this proposal, the current access route is unsuitable for transporting the new equipment. The planned improvements will ensure safe and efficient delivery and will involve construction traffic in the area.

To ensure safe and efficient delivery of the transformer, the following works are proposed:

- Widening and realignment of the access track to accommodate abnormal indivisible load (AIL) vehicles
- Replacement of two bridge structures that are unsuitable for heavy construction vehicles
- Drainage improvements, including new culverts and outfalls
- Cut and fill earthworks to manage gradients along the route
