**In January 2024, Alyth substation underwent energisation of the STATCOM and MSCDN equipment on site. The full substation platform is now operational under SSEN Transmission operational safety rules.**

Removal of the original welfare compound was completed in early January 2024, with reinstatement earth works now well underway – with the intention to have planting of trees and sowing of wildflowers completed by the Spring 2024.

Currently, the primary focus is on completing snagging and defects across the site with the reinstatement works progressing well.

**If you have any questions, please do not hesitate to contact our Community Liaison Manager:**

## Upcoming activities

In coming months, our focus is on finishing up the remaining minor tasks in the substation, which will be energising the two Tealing circuits. These are currently unable to be completely energised due to ongoing works in the Tealing Substation.

As first phase of the project wraps up, we're gearing up for the next phase of upgrading the Alyth substation to 400kV voltage level, set to start in Q1 2025.
