

# Coire Glas Connection Project

## New switching station location and overhead line changes

**SSEN Transmission invites you to share your views.**

### About the Project

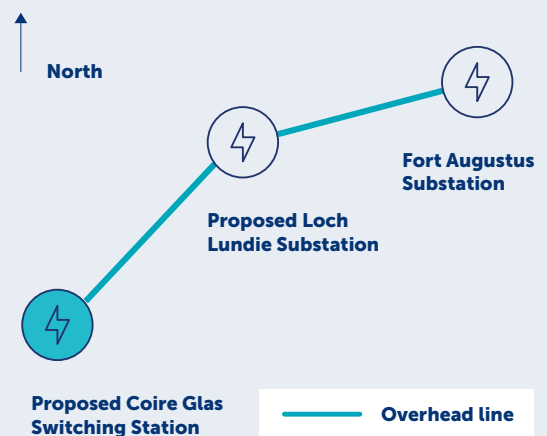

The Coire Glas connection project is required to connect the Coire Glas Pumped Hydro-Scheme via a new 400kV substation and switching station and 400kV overhead line.

Following previous events in April 2022/2023, we are hosting a new round of statutory pre-application events for the proposed Coire Glas switching station, due to a new proposed location for the switching station.

### What are we consulting on?

During this first of two rounds of Pre-Application drop-in events, we will present the proposed new location for the switching station and proposed changes to the 400kV overhead line alignment, seeking feedback on our proposals. There will be an opportunity to discuss our proposals and the wider scheme in full with the project team and share your comments and feedback ahead of further consultation later this year.

### Coire Glas Connection Project

We are consulting on the elements shaded **Teal**.

### The events will be held on:

**Wednesday 30 July, 3–7pm**

Glengarry Community Hall,  
Invergarry, PH35 4HG

**Thursday 31 July, 3–7pm**

Fort Augustus Village Hall,  
Church Rd, Fort Augustus, PH32 4DG

**If you have any questions, please don't hesitate to contact our Community Liaison Manager:**

**Sally Cooper**

10 Henderson Road, Inverness, IV1 1SN
