

**Scottish & Southern Electricity Networks**

### The Pathway to 2030

Building the energy system of the future will require the partnership with the UK and Scottish governments. We're committed to meeting our obligation of delivering new, renewable energy to where it's needed by 2030.

**Achieving net zero**

By 2030, 50% of the electricity generated in Scotland will be from renewable sources. This will require significant investment in new infrastructure, including new power generation, transmission and distribution assets.

**Meeting our 2030 targets**

Our 2030 targets are: 50% renewable electricity, 50% renewable gas, and 50% renewable heat. We will be working with our partners to ensure we meet these targets.

**Securing our energy future**

We are committed to providing a secure and reliable energy supply for Scotland. This means investing in new infrastructure and working with our partners to ensure we have the resources we need to meet our obligations.

### The Pathway to 2030

**Future network investment requirements**

Our future network investment requirements are based on our 2030 targets. We will be investing in new infrastructure to meet these targets, including new power generation, transmission and distribution assets.

**What does this mean for central Scotland?**

The Kinardochy - Errochty Underground Cable project is a key part of our future network investment requirements. It will provide a secure and reliable energy supply for central Scotland, helping us meet our 2030 targets.
