### Upcoming works

- Works in the GIS building will continue, with GIS equipment installation and cable terminations in local control cabinets.
- Completion of the transformer vacuuming and oil filling process and bitumous road surfacing works around the site.
- The two overhead line towers will be fully assembled into position and pre-stringing of conductors between both towers ahead of outage works.
- Completion of the remaining mechanical and electrical (M&E) services within the STATCOM building.
- Works will continue with the installation of electrical support structures across the substation platform.
- Deliveries of main GIS and STATCOM equipment and materials will continue.

Construction works are progressing on SSEN Transmission's Kinardochy substation project which will see the construction of a new 275/400kV electrical substation three kilometers south from Tummel Bridge. The equipment being installed will play a critical role in ensuring voltage limits on the transmission network remain stable and power flows can be efficiently managed allowing for the connection of new renewable generation to the grid and enabling clean energy to be transported to where it is needed most. Safety is always our first priority at SSEN Transmission and with this in mind, we ask that you please remain vigilant of signage or direction around the construction works.

### Works carried out to date

- The Static Compensator Transformer (SCT) was successfully delivered to site in June. Oil filling operations to commence from 17 August.
- The Gas Insulated Switchgear (GIS) building is complete with the installation of the main GIS switchgear underway.
- Installation of the overhead line tower piling and foundation civil works are complete with tower steelwork assembly in progress.
- Bitumous surfacing works have commenced on the substation platform access road and around the site.
