1. OPERATIONAL NOISE IMPACT ASSESSMENT

- 1.1.1 This appendix presents the Operational Noise Impact Assessment for the Proposed Development. It should be read in conjunction with **Volume 2, Chapter 15: Noise and Vibration** and **Volume 1, Chapter 3: Project Description** of the **EIAR** for full details of the Proposed Development. This appendix considers two scenarios: firstly, if the towers and OHL were to move a maximum of 55 m at suspension towers and 100 m at angle towers, as per the limit of deviation described in **Chapter 3: Proposed Development** (Table 15.4.1) and secondly, if the towers and OHL were to be constructed as designed (Table 15.4.2). Section 1.4 focusses on the operational noise impacts of the various temporary OHL diversions and permanent OHL realignments which form part of the Proposed Development (Tables 15.4.3-15.4.7). NSRs that are more than 500 m from an OHL that is predicted to produce noise during operation are scoped out, as shown in **Table 15.4.1** and **Table 15.4.2**.

1.2 TGN(E)322 Assessment If Towers Move Maximum Distance within LOD

1.4 Craigiebuckler to Tarland 132 kV OHL and Kintore to Fetteresso 275 kV/400 kV OHL

1.4.1 Operational noise of the existing Craigiebuckler to Tarland 132 kV OHL Diamond Diversion and existing Kintore to Tealing 275 kV OHL Diversion routes are scoped out due to negligible noise impacts. The existing Kintore to Fetteresso 275 kV/400 kV OHL Diversion route uses twin totara which has the potential for noise impacts.
