

To help illustrate the likely height of the towers, please see the below graphic which was used for a proposed new overhead line project between Spittal and Beaulieu.

- The **tallest tower** suite below (SSE400) is **what we propose to use for the Loch Fearn PSH Connection project**
- The **existing steel towers between Fort Augustus and Skye** which pass close to the C1144/U1207, **are similar to the smallest tower (PL16 D2)** shown below.
