# Shetland HVDC Project

## Marine Licence Consultation Response Update

### Come and talk to us

In July 2019, Scottish Hydro Electric Transmission held two consultation events in Lerwick and Wick to consult on our plans to install a subsea HVDC cable between Weisdale Voe on Shetland and Noss Head in Caithness as part of the wider Shetland HVDC connection project.

Prior to submitting an application for a marine license to Marine Scotland and an application for a marine works license to Shetland Islands Council, we will be holding two additional events to present responses to comments received during our consultation.

We welcome all local stakeholders and interested parties to attend our open-door events and meet with the project team to discuss our plans.

For more information, please come along to an event. If you are unable to attend an event, further information is also available from the project webpage or can be obtained via the project Community Liaison Manager:
