Shetland HVDC Project Marine Licence Consultation Events

Come and talk to us

Scottish Hydro Electric Transmission (SHE Transmission) will be holding public consultation events regarding proposals to install a subsea high voltage direct current (HVDC) cable between Weisdale Voe in Shetland and Noss Head near Wick in Caithness to enable the connection of renewable energy on Shetland.

We would like to extend an invitation to local people and interested parties to attend our open-door events to discuss our plans with the project team and to let us know their views prior to a submission of a marine licence application to Marine Scotland.

As part of the Caithness - Moray project marine safety initiative, we have a number of copies of the UKHO chart of the Moray firth that will be available to local boat owners on a first come basis.

For more information and to provide comment, please come along to an event. If you are unable to attend an event, further information is also available from the project webpage or can be obtained via the project Community Liaison Manager, **Kelly Scott**:
