

Shetland Public Consultation Events

Converter, substation, and onshore & offshore circuits engagement and Pre-Application Consultation events

We are hosting a series of public events across the north of mainland Shetland and on the island of Yell during the week of 6th October. These events seek stakeholder feedback to inform our proposed developments and include a Pre-Application Consultation (PAC) event to be held at the Voe public hall as part of the process for our Section 37 consent application under the Electricity Act 1989.

The Shetland Islands have a vital role to play in the UK's clean energy future. In March 2024, the National Energy System Operator's (NESO) Beyond 2030 report confirmed that additional transmission infrastructure is needed across Shetland to connect future renewable generation and to support security of electricity supply across Great Britain.

At these events, we will be sharing our progress on site and route selection for the infrastructure that is required, including details on how this is being developed. This will be presented on hand outs, maps and visualisations. Digital versions of all materials will also be available on our project web page.

Interested parties can attend these drop-in events to view and discuss plans ahead of the consent application being submitted. We are keen to hear feedback from a broad range of stakeholders and would encourage all those with an interest to share their views and local insight at these events.
