

Yell High Voltage Alternating Current (HVAC) Connection

Marine consultation event

We are holding a consultation event for the marine element of our proposed Yell HVAC Connection project. The process is undertaken in advance of our Marine License application to the Marine Directorate.

During this consultation event, you will be able to meet the project team and view information on our proposal to install a HVAC subsea cable that will connect Yell to the Transmission system on Mainland Shetland.

We would like to invite members of the public and interested parties to view our early-stage plans, ask questions, and share local insights that will help shape our marine licence application. Your knowledge and input are vital in helping us understand how our proposals may interact with fishing activity in the area.

The feedback period is open until 7 August and you can provide feedback using the online feedback form by scanning the QR code that is provided below.

The events will be held at the following locations:

**Wednesday 25 June, 2–6:45pm
Burravoe Hall, Burravoe,
Yell, ZE2 9AY**

**Thursday 26 June, 2–7pm
Voe Public Hall, Voe,
Shetland, ZE2 9PT**

We encourage all members of the local community and all interested parties to attend the event.

To find out more and register for project updates, scan the QR code visit the project website: ssen-transmission.co.uk/projects/project-map/southyellsubstation
