SM1819	n/a	Scheduled Monument	Torball Farm, cairn 1450m WSW of	The monument comprises a prehistoric burial cairn, between 4500 and 3500 years old, sitting on the eastern edge of a knoll in rough open moorland, just within a birch wood. The cairn is roughly circular, measuring about 17.3 m from N to S, by 16.6 m transversely, and up to 2 m in height on the E side, which would have given this cairn pronounced visual emphasis when viewed from the E. Around the base of the cairn is a kerb of large contiguous boulders, averaging about 0.3 m in height and 0.4 m to 0.6 m in length. On top of the cairn is a slight circular depression, approximately 2 m in diameter. The main body of the cairn is composed of small stones covered in heather, grass and a small number of birch trees; a pheasant pen has also been constructed on the SE corner. SM1813	n/a	Scheduled Monument	Rivra, chambered cairn 520m N of	This monument consists of a chambered cairn situated close to the E end of a ridge. The chambered cairn is of Orkney-Cromarty type and was excavated by Curle in 1909. It survives to a height of about 1.7m, measures 17m N- S by 16m E-W and has projections ("horns") to its W and E sides. Close to the centre of the cairn is a well defined polygonal chamber about 2.8m by 2.1m.	Neolithic to Iron Age	Designated	n/a			Within 10 km	6.21 km
SM1805	n/a	Scheduled Monument	Creich Mains, chambered cairn 1170m NE of	The monument consists of a chambered cairn on the top of a steep sided moorland ridge. The chambered cairn is round and may originally have been horned. It is about 17m in diameter and 1.8m high and of bare stone. In the centre a number of slabs protrude from the body of the cairn and these probably form part of the structure of an internal chamber. The most prominent of these stones projects 1m from the surface of the cairn. A possible horn projects from the NW side of the cairn.	Neolithic to Iron Age	Designated	n/a			Within 10 km	7.71 km

LB52609	n/a	Listed Building	Brora Harbour, Harbour Road, Brora	Dating from 1813-14 and designed by William Hughes, Brora Harbour is a compact tidal harbour at the mouth of the River Brora in Sutherland. It has two quays on the south shore of the river and the roughly rectangular basin is enclosed to the north by an artificial bank, connecting the shore to a small island, with vegetation growing on top. Brora Harbour is a traditionally constructed maritime structure that is prominent in the landscape, close to the mouth of the River Brora. It forms part of a group of historically related buildings linked to heavy industry and the fishing industry, including an icehouse (listed at category C, LB573) and a walled enclosure possibly relating to a former herring curing yard or related fishing structure. LB52062	n/a	Listed Building	ROGART SOUTH, FORMER SIGNAL BOX	1891, Dutton and Company 'Type 1'. 2-storey, rectangular-plan former signal box. Timber weather-boarding and cover-strip construction. Signal boxes are a distinctive and now rare building type that make a significant contribution to Scotland's diverse industrial heritage. Of more than 2000 signal boxes built across Scotland by 1948, around 150 currently survive (2013) with all pre-1948 mechanical boxes still in operation on the public network due to become obsolete by 2021. This 1894 former signal box is a rare and well-maintained example of its type, currently in use as a permanent way hut or base for rail staff looking after the tracks in this area. It retains its original window arrangement to the signal cabin and porch and is notable for its attractive decorative timber bargeboarding. It is the first design by the English signalling manufacturer, Samuel Dutton & Company who were contracted to build all the boxes between Invergordon and Georgemas. This box is similar to the Type 3 design by McKenzie and Holland which became the most widely reproduced box on the Highland Railway. Dutton was previously an engineer with McKenzie & Holland and took a number of patents with him when he set up on his own account. As of 2013, a small number of other 'Type 1' boxes by Dutton remained on the Far North Line including Helmsdale (see separate listing) and Forsinard. Rogart Station itself was not considered to be of special interest at the point of the 2013 signal box review. Listed as part of Scottish Signal Box Review (2012-13). GDL00160	n/a	Garden and Designed Landscape	Dunrobin Castle	'C' and 'D' measure respectively 8.5m and 10.0m internal diameter; the former is visible as a low platform with residual walling around the rim, and the latter is best preserved in the south arc, where the presence of inner and outer facing stones indicate a wall breadth of 1.8m. The field system, occupying four hectares, comprises a scatter of stone clearance heaps and occasional lynchets, but in the extreme NW side of the system is a complex of contiguous, irregularly-shaped fields, demarcated by boulder walls up to 1.5m high. Some of these fields contain clearance and are sub-divided by lynchets; one such division measures 30.0m by 30.0m. The construction of the field walls ie. a single line of boulders set on edge, indicates a hut circle association; their excellent state of preservation corresponds with that of huts A and B. MHG10597	n/a	HER	Bridge of Horn	At NC 795 045, at the base of a steepening south-facing slope, is a close group of three similar hut circles (A-C), now overgrown with heather. They measure from 13m by 11.5m to 12.5m by 10.5m within tumbled walls spread from 2.5m-3.5m, and up to 0.6m high. The entrance in each case is in the south or south-south-east on the line of the longer axis. There is no definite evidence of cultivation around the huts, but some 200m to the NE are several stone clearance heaps and cleared ground, which are probably contemporary with the huts. Surveyed at 1:10,000. Visited by OS (N K B) 15 May 1981. (Neolithic to Late Iron Age - 4000 BC? to 560 AD?)	Neolithic to Iron Age	Non-designated	n/a	279618	904581	Within Proposed Development	0 m

MHG10820	n/a	HER	Crannog, Eilean nam Faoileag	Eilean nam Faoileag is a small island formed of boulders and said to be artificial. No sign of a building remains on the level top, but along the E face for 30 to 40ft are the remains of a retaining wall some four or five feet high. On the E and W faces near the N end, two built recesses probably indicate the position of the stairs mentioned in the NSA (1845). At the S end a circular depression may mark the site of a well. Gordon (1813) states that the island appears to have been occupied as a hunting seat in the 17th century.	Iron Age	Non-designated	n/a	285600	906000	Within 1 km	218 m

MHG11482	n/a	HER	Hut circle, Glen Rock	Set on a slight shelf of the south facing hill-slope are the upstanding remains of an impressive hut circle. The area in front of the main entrance, to the south, is grass covered, but most of the monument is clad in deep heather. Large boulders mark the sides of the main entrance, c.1m wide, which gives access to an area c.12m diameter within the walls. At the 'front' of the structure the wall is at least 0.5m high, whilst at the 'back' it is c.1.5m high, and is spread between 1.5m and 2.5m. There is a second break in the wall, in the south east, which could possibly mark the entrance to a souterrain under the grassy area. MHG34884	n/a	HER	ABERCROSS	An area of small cairns, lying in heather and sheltered by a ridge to the W, was noted by J Wordsworth during a pre-afforestation survey. The cairns are spread over an area measuring 150m from E to W by 70m. Although they are situated just to the E of a township (NC70SE 53), the cairns are thought to be prehistoric in date. MHG10605	n/a	HER	Hut circle, Aberscross	This hut circle, is presumably enclosure noted by RCAHMS, no other enclosures could be located in the vicinity (OS {R D L}). It is ill-defined, measuring 14.5m NW-SE by 13m between centres of a wall with an entrance gap in the SE. A 4m break in the NW arc, and a lowering of the floor level in the same quadrant gives an impression of a rectangular structure 9m by 4m (possibly associated with nearby deserted settlement of Aberscross to the NNE) obtruding into the hut by about 3.5m. Contemporary cultivation is indicated by one or two stone clearance heaps on slopes to NW. Revised at 1:10,000. Visited by OS (RDL) 15 4 1964 and (JM) 17 July 1975. MHG9441	n/a	HER	Tower House? Aberscross	Aberscross was the residence of the Murrays who came to Sutherland in 1198. Scarcely a vestige remains of their seat, yet the green fields around it show where they lived. J Mackay 1895; W Macfarlane 1906-8. Aberscross depopulated site is centred at NC 769 001, but none of the remains could be identified as representing a tower. No further information. Visited by OS (R D L) 15 April 1964. MHG10329	n/a	HER	Meall Clais Nan Each	At NH 6933 9930, high up in a S-facing hillside, is a hut circle with an accompanying minor field system. The hut, levelled-up and set back into a sheltered shelf, measures 14.0m NW-SE by 13.0m transversely across over a heather-covered wall, best preserved in the SW as a rubble spread 0.5m high and 2.0m broad; an ill-defined entrance is in the SE. Boulder-slab revetting is clearly visible in the SW exterior of the hut stance. The minor field system comprises a scatter of stone clearance heaps and tenuous signs of occasional lynchets. There are no measureable plots. Surveyed at 1:10,000. Visited by OS (J M) 27 August 1980. (Neolithic to Late Iron Age - 4000 BC? to 560 AD?) MHG41929	n/a	HER	Torboll Fall	Field system. Part of: Torboll Fall (Monument) (MHG11685). The field system, defined mainly by stone clearance heaps with occasional field walls and lynchets, is best preserved in the vicinity of hut 'A', where a typical field measures 30.0m by 15.0m. MHG11685	n/a	HER	Torboll Fall	Centred at NH 745 988 on a SE-facing slope is a settlement of five poorly defined stone-walled huts (A-E) with field system. Hut 'A' on a shelf, is circular, measuring 14.0m in overall diameter. Occasional outer facing stones are visible, but all other details are obscured by peat growth. 'B' survives as a circular platform, 8.5m in diameter set into the SE slope. It is bounded on the NW side by a back-scarp, and on the lower SE side by a stony build-up. No entrance is apparent. 'C' is oval, measuring c.11.5m NW-SE by c. 10.0m between wall centres, the wall being spread to c.2.0m all round. A gap in the SE arc may indicate the entrance. The field system, defined mainly by stone clearance heaps with occasional field walls and lynchets, is best preserved in the vicinity of hut 'A', where a typical field measures 30.0m by 15.0m. Visited by OS (N K B) 17 November 1969. 'D' is oval, and measures 12.0m NW-SE by 11.0m between wall centres, with the wall wasted in the S. Entrance gap in the SE. 'E' is 10.5m in diameter between wall centres. Entrance is in the SE. Huts surveyed at 1/10,560. Visited by OS (J B) 13 May 1975.	Bronze Age	Non-designated	n/a	274538	898883	Within 1 km	638 m

Canmore 13920	n/a	Canmore	Loch Buidhe	At NH 6661 9877 and NH 6642 9871, on a S-facing hillside, are two hut circles (A and B respectively). Both huts are heather-covered and ill-preserved. 'A', on a slight rise, measures approximately 9.5m by 8.0m within a wall reduced to a rubble spread at most pronounced 2.0m broad and 0.2m high. The entrance is in the SE, on the line of the long axis. 'B', built up on and set back into the slope, is reduced to a platform measuring some 9.0m NW-SE by 8.0m. There are no other surviving details. Contemporary land use is denoted by a scatter of field clearance heaps on the down-slope S from hut 'A'.	Unknown	Non-designated	n/a			Within 1 km	641 m
Canmore 14002	n/a	Canmore	Migdale	A stone-walled hut, situated on a low knoll, and measuring some 10.0m in diameter between wall centres, the walling spread to about 2.0m all round. The simple entrance in the SE is mutilated. There are a number of contemporary stone clearance heaps S of the hut. Canmore 14011	n/a	Canmore	Migdale	This feature is situated on a small, dry knoll in broken and sometimes marshy country. It appears to be an enclosure, albeit ill-defined, rather than a fortuitous arrangement. It is approximately 14.5m in overall diameter, although its circularity is not perfect, small angular bends occurring around the perimeter. Canmore 14017	n/a	Canmore	Badachuill	At NH 6358 9306 is an oval stone-walled hut, with several stone clearance heaps nearby from contemporary cultivation plots. The hut is defined by a wall spread to c.2.5m in the W from where it deteriorates until it is scarcely visible in the NE. It measures c. 10.0m N-S by c 8.0m between wall centres. A gap in the SSE denotes the entrance.	Unknown	Non-designated	n/a			Asset formerly associated with Project Element no longer in consideration	4.45 km
Canmore 14038	n/a	Canmore	Badachuill	At NH 6357 9333, on the edge of a low escarpment overlooking an eroded stream bed, there is a hut circle, the NW arc of which has been destroyed by land-slip, revealing a section of the bank. Examination of the section suggests that the hut was of timber construction supported by a low stone retaining wall backed by an earthen bank, the latter revetted with large boulders on the	Unknown	Non-designated	n/a			Asset formerly associated with Project Element no longer in consideration	4.20 km
