GDL00150	12.3 - 2	Garden and Designed Landscape	Dunbeath Castle	Huts A and B are similar and unusually well-preserved, which contrasts strongly with the reduced overgrown huts C and D. In each case the entrance is in the east arc. 'A' is 9.3 internal diameter within a wall 0.8m average height varying from 1.8m actual width to 2.3m at the entrance. This wall is faced internally with boulders set up with their flat side facing inwards; the interseces between the boulders are filled with smaller chockstones. The outer facing stones are noticeably smaller than the inner. The wall core appears to be entirely of rubble stones. At the inner end of the entrance are two opposing portal stones 0.8m apart and 1.1m high. Hut B is 6.3m in diameter within a wall similar in construction to A, but 1.4m wide. The entrance is blocked, its position indicated by a looseness of the stone.	Post-Medieval	Designated	n/a	High	Setting

850	12.4 - 2	AOC Field	Building, Lower Caen	Stone footings for a rectangular building.A community excavation, planned to commemorate the bicentenary of the Kildonan Clearances, was undertaken by The University of The Highlands and Islands (UHI) under the direction of K Strickland in 2013 at the deserted township of Lower Caen. An initial programme of topographical mapping and geophysical survey was carried out. As the structural remains were clearly visible the fluxgate gradiometer survey aimed to identify the location of hearths, middens and other possible internal features. Unfortunately, the underlying granite masked not only more subtle responses but even that from a large corn-drying kiln. As a result it was only possible to identify features already visible, such as extant walls and 'potato' pits. The topographic information was shared with a team from the University of St Andrews 'Virtual Worlds' group in order to develop an immersive 'Virtual Caen'. The first season of excavations focused upon the final phase of occupation and subsequent abandonment of a single longhouse (Structure 1) and its associated outbuilding (Structure 2). Two L-shaped trenches were laid out to provide a half-section across both structures along the N-S (Trench B) and E-W (Trench A) axes.. Condition was recorded as Very degraded. Site was likely to date to the Post-medieval period.	Post-Medieval	Non-designated	n/a	Low	Direct

853	12.4 - 2	AOC Field	Dyke, Lower Caen	A small section of stone and turf dyke. A community excavation, planned to commemorate the bicentenary of the Kildonan Clearances, was undertaken by The University of The Highlands and Islands (UHI) under the direction of K Strickland in 2013 at the deserted township of Lower Caen. An initial programme of topographical mapping and geophysical survey was carried out. As the structural remains were clearly visible the fluxgate gradiometer survey aimed to identify the location of hearths, middens and other possible internal features. Unfortunately, the underlying granite masked not only more subtle responses but even that from a large corn-drying kiln. As a result it was only possible to identify features already visible, such as extant walls and 'potato' pits. The topographic information was shared with a team from the University of St Andrews 'Virtual Worlds' group in order to develop an immersive 'Virtual Caen'. The first season of excavations focused upon the final phase of occupation and subsequent abandonment of a single longhouse (Structure 1) and its associated outbuilding (Structure 2). SM13619	12.3 - 4	Scheduled Monument	Lettie's Grave, square cairns	The monument comprises the remains of three square burial cairns, probably dating to between 500 AD and 800 AD. They are visible as three stone settings, arranged around 11m to 12m apart, and in a roughly equilateral triangle. The cairns lie at around 120m above sea level, on a level terrace overlooking the River Lettie.	Medieval	Designated	n/a	High	Setting
SM1827	12.3 - 4	Scheduled Monument	Achnagarron, settlement 380m WNW of Glenelg	The monument consist of the remains of roundhouses (hut circles) and elements of an associated field system, probably dating to the Bronze Age (between 2500 and 800 BC). This monument is of national importance because it can make a significant addition to our understanding of the past, in particular of Bronze Age society and agriculture in north Scotland. The monument's importance is enhanced by its association with the wider landscape of later prehistoric settlement. The loss or damage of the monument would diminish our ability to appreciate and understand the character of Bronze Age settlements, as well as society and economy during this period. SM1819	12.3 - 4	Scheduled Monument	Torboll Farm, cairn 1450m WSW of	The monument comprises a prehistoric burial cairn, between 4500 and 3500 years old, sitting on the eastern edge of a knoll in rough open moorland, just within a birch wood. The cairn is roughly circular, measuring about 17.3 m from N to S, by 16.6 m transversely, and up to 2 m in height on the E side, which would have given this cairn pronounced visual emphasis when viewed from the E. Around the base of the cairn is a kerb of large contiguous boulders, averaging about 0.3 m in height and 0.4 m to 0.6 m in length. On top of the cairn is a slight circular depression, approximately 2 m in diameter. The main body of the cairn is composed of small stones covered in heather, grass and a small number of birch trees; a pheasant pen has also been constructed on the SE corner. GDL00160	12.3 - 3	Garden and Designed Landscape	Dunrobin Castle	'C' and 'D' measure respectively 8.5m and 10.0m internal diameter; the former is visible as a low platform with residual walling around the rim, and the latter is best preserved in the south arc, where the presence of inner and outer facing stones indicate a wall breadth of 1.8m. The field system, occupying four hectares, comprises a scatter of stone clearance heaps and occasional lynchets, but in the extreme NW side of the system is a complex of contiguous, irregularly-shaped fields, demarcated by boulder walls up to 1.5m high. Some of these fields contain clearance and are sub-divided by lynchets; one such division measures 30.0m by 30.0m. The construction of the field walls ie. a single line of boulders set on edge, indicates a hut circle association; their excellent state of preservation corresponds with that of huts A and B. MHG9786	12.4 - 3	HER	Kintradwell	Situated on the summit of a low hillock this oval stone-walled hut of simple form measures about 8.5m NW-SE by 7.0m NE-SW internally within a wall spread to about 2.0m. The entrance is in the SE. All details of construction are obscured by peat built-up. There is no cultivation around the hut but on gentle SE-facing slope to the SE, at NC 912 077, is a small well-defined field system 2.5 hectares in extent. Several irregularly-shaped field plots, 30m by 20m average size, are evident delineated by stone clearance heaps and occasional lynchets. Visited by OS (J B) 8 December 1975. MHG9790	12.4 - 3	HER	Hut circles etc, Wester Kintradwell	On fairly level ground within an area of later cultivation is a settlement of three stone-walled huts ('A' - 'C'). 'A' and 'B' are circular and measure approximately 12m and 8m in diameter within a wall spread to 4.5m maximum breadth. Occasional facing stones on edge are discernible. 'C' is oval about 14.5m NW - SE by 12m within a wall less massive than 'A' or 'B'. In each hut entrance is in SE. There are some stone clearance heaps nearby which are probably contemporary, but these occur amidst field clearance associated with an 18th/19th century depopulated hamlet and no field pattern is evident. SM2396	12.3 - 6	Scheduled Monument	Balnacrae, chambered cairn 230m WSW of	The monument is the remains of a chambered cairn dating from the Neolithic period, probably built between 3800 and 2500 BC. It is visible as a group of large upstanding stones defining a chamber and an entrance passage, and is surrounded by a slight scarp that probably indicates the original extent of the cairn. The cairn lies 245m above sea level, part way up the northwest side of Strath Sgitheach. The River Sgitheach is about 600m to the south southeast and there are long views up the strath to the south southwest. The monument is an Orkney-Cromarty type chambered cairn with the chamber aligned northeast by southwest and is defined by several large stones, some upright or leaning, others slumped. The monument has the potential to enhance understanding of the past, in particular the design and construction of burial monuments and the nature of burial practices and belief systems. Ritual and funerary monuments are often our main source of evidence for human activity during the Neolithic in Scotland. They are particularly important for enhancing our understanding of Neolithic society, its organisation, economy, religion and demography. This monument retains its field characteristics to a marked degree. The large upright stones of the chamber are visually impressive and the form of the monument can contribute to our understanding of the development and architecture of chambered cairns. Chambered cairns are an important surviving component of the wider prehistoric landscape of land-use, settlement and ritual and the position of Balnacrae within the landscape is likely to be significant. The loss of the monument would diminish our ability to appreciate and understand the meaning and importance of death and burial in prehistoric times and the placing of cairns within the landscape. SM10495	12.3 - 6	Scheduled Monument	Strath Sgitheach, settlement NW of Cnoc a'Mhuilinn	The monument is of national importance as a well-preserved late prehistoric settlement which has the potential to provide information about prehistoric domestic and agricultural activities and land-use changes. The close association of a settlement with a number of cup-marked boulders is unusual, although the significance of this is not known. 1976 survey found: Hut 'A', on a knoll, survives as a platform, c. 11.5m NW-SE by c. 10m bounded by traces of a wall. Several outer facing stones are visible in W arc. The position of the entrance is not evident. 'B' is c. 13m NNW-SSE by c11m between the centres of a wall of indeterminate thickness, with one or two outer and inner facing stones visible in SW arc. The entrance cannot be seen. A field wall joins hut in the SE arc. 'C' is c11.5m NNW-SSE by c9.5m between centres of a wall of indefinite thickness, with outer face visible intermittently around S arc. The mutilated entrance is in SSE. 'D' measures c13m NNW-SSE by c11m between the centres of a wall of uncertain thickness, which has been extensively robbed revealing the inner face of contiguous stones around E arc. Occasional outer facing stones occur around W arc. The entrance in SSE is mutilated. 'E' is c13m NW-SE by c11m between centres of a wall of indeterminate thickness. The ill-defined entrance is in SE. 'F' is c9.5m NW-SE by c7.5m between centres of a wall of indeterminate thickness. The ill-defined entrance is in SE. 'G' measures c13m NW-SE by c10m between centres of a denuded wall. The entrance is in SE. About 100m S of hut 'B' are traces of a platform c.12m diameter (marked 'X' on 6" sheet). Around W arc is a discontinuous line of stones, possibly outer wall face of a hut. There are several stone clearance heaps and field walls apparent, particularly in vicinity of huts B, C and D, but no measurable cultivation plots can be seen because of a heavy growth of peat. Two of the hut circles are already scheduled; this re-scheduling proposal extends protection to the other two and to a larger surrounding area. The hut circles - the foundations for prehistoric timber houses - are loosely grouped together at around 250m OD on a SE-facing hillslope, overlooking upper Strath Sgitheach. The most easterly circle (which lies about 25m from the edge of a large forestry plantation) measures about 11m by 13m, with an entrance on the SSE side. Just over 100m to the NNE lies a second hut circle, of similar size but with no apparent entrance. SM4579	12.3 - 6	Scheduled Monument	Carn Mor,dun	The monument consists of a circular dun measuring 18m across internally within a wall spread up to 6m wide.The monument is of national importance as a fine example of an Iron Age fortification; the central dun is a type of structure more common in the west of Scotland but its combination with banks and ditches is reminiscent of the brochs of Sutherland northward. It is thus of national importance to understanding of the relationship between the various peoples of late prehistoric Scotland and of late prehistoric defensive structures. SM5696	12.3 - 6	Scheduled Monument	Urquhart,Old Parish Church	The monument consists of the former parish church of Urquhart which is dedicated to St Maelrubha. It is specified in the "Breviary of Aberdeen" that a wooden chapel was built at Urquhart on the spot where St Maelrubha was martyred in 721 and that this church was superseded by the parish church of Urquhart or Ferintosh. The present church, situated in an extended burial ground overlooks the neck of the Cromarty Firth to the N. The monument is of national importance because it is a post-medieval church which, if medieval documentary sources and local traditions are taken into consideration, links the site of the parish church of Urquhart with the martyrdom of St Maelrubha and the erection of a wooden church on the spot in AD 721. The present building is likely to overlie the site of one or more earlier Medieval churches and as such it provides evidence and has the potential to produce further evidence through excavation, for ecclesiastical architecture, early Christian history, burial practices, parish development and material culture. SM3655	12.3 - 6	Scheduled Monument	Drummondreach,dun 400m E of	The monument consists of a dun with outer defences on the edge of a steep drop to a burn. The dun is sub-circular in plan. The monument is of national importance for its potential to contribute towards an understanding of prehistoric defensive architecture. The site also contains important information about the domestic organisation and farming practices of a prehistoric community.	Iron Age	Designated	n/a	High	Setting
SM3145	12.3 - 6	Scheduled Monument	Mulchaich, chambered cairn 80m NE of Auchencairn	The monument is a chambered cairn dating from the late Neolithic period to the early Bronze Age (between 3800 and 2500 BC). The cairn is visible as a mound with exposed kerbs and is located on a grassy knoll overlooking the Cromarty Firth. The monument is of national importance because of its potential to make a significant addition to our knowledge and understanding of the past, particularly the design and construction of burial monuments, and the nature of belief systems and burial practices during the late Neolithic period and early Bronze Age in northern Scotland. The cairn has good field characteristics, allowing us to interpret its form, function and position in the landscape and has potential for the presence of buried archaeological remains, including burials, artefacts and palaeoenvironmental evidence. Architectural features such	Neolithic to Bronze Age	Designated	n/a	High	Setting

				as the inner and outer kerb and the likely remains of a central chamber are notable. The cup-marked stone forming part of the inner kerb is an unusual feature and adds to the importance of the cairn. There are other cairns in the vicinity of the monument, which together can contribute to our understanding of the form and nature of the prehistoric landscape. This is important for enhancing our understanding of late Neolithic and early Bronze Age society, its organisation, economy, religion and demography. The loss of the monument would significantly diminish our future ability to appreciate and understand funerary practice, death and burial in prehistoric times, and the placing of such monuments within the landscape.

Flecks of charcoal were noted in the subsoil on both sides of this feature but only in small quantities and may have resulted from heather burning rather than direct human activity. SM1672	12.3 - 6	Scheduled Monument	Knock Farril, fort, Knockfarrel, Fodderty	The monument to be scheduled comprises the remains of a vitrified hillfort on a ridge that overlooks Loch Ussie from the N. The monument is of national importance as the remains of a vitrified hillfort which includes the unusual survival of two associated look-out posts. It retains the potential to provide important information about the date and function of this class of hillfort.	Iron Age	Designated	n/a	High	Setting
SM3987	12.3 - 6	Scheduled Monument	Loch Kinellan, crannog	Secular: crannog (with post-prehistoric use)	Iron Age to Modern	Designated	n/a	High	Setting
SM1667	12.3 - 6	Scheduled Monument	Achilty, henge, Contin	Prehistoric ritual and funerary: henge	Neolithic to Bronze Age	Designated	n/a	High	Setting
SM11056	12.3 - 6	Scheduled Monument	Carn na Buaille, fort 750m NNW of Comrie, Contin	The monument consists of a multi-period hill-top fort, situated at around 180m OD in coniferous woodland. This monument is of national importance as the remains of a multi-period fort which has the potential to provide valuable information on defensive architecture, as well as the nature of settlement and economy, from a number of different periods.	Bronze Age	Designated	n/a	High	Setting
SM2466	12.3 - 6	Scheduled Monument	Clachan Corrach, chambered cairn 375m E of Beallach Farm	The monument is the remains of a chambered cairn dating from the Neolithic period, probably built between 3800 and 2500 BC. It is visible as a group of upstanding stones that define a chamber to the west and an entrance passage to the east.	Neolithic	Designated	n/a	High	Setting
SM2397	12.3 - 6	Scheduled Monument	Preas Mairi, chambered cairn	Prehistoric ritual and funerary: chambered cairn	Neolithic to Iron Age	Designated	n/a	High	Setting
SM13629	12.3 - 7	Scheduled Monument	Achnasoul, medieval earthwork 440m SSE of	The monument is a moated enclosure of probable medieval date. It is visible as a large earthwork comprising a ditch and concentric internal and external banks, which together enclose a sub-circular area measuring around 43m northwest-southeast by 39m northeast-southwest. This monument is of national importance because it makes a significant addition to our understanding of the past, in particular the date, use and development of moated homesteads in the north of Scotland. Moated homesteads are a relatively rare type of monument in Scotland, with few examples identified in highland areas of Scotland. The example at Achnasoul is impressive and retains its field characteristics. Moated homesteads are interpreted as local power centres in the medieval period and as such this monument would have been an important component of the wider medieval rural landscape. The loss or damage of the monument would diminish our ability to appreciate and understand the character of medieval rural settlement, including the extent and nature of the feudalisation of this part of Scotland, and the structure and organisation of society and economy more widely during this period. SM5212	12.3 - 7	Scheduled Monument	Dun Fhamhair, fort	The monument comprises the remains of an oval fort of the Iron Age, measuring 43m N-S by 35m within a wall up to 3.5m across with outer facing stones visible for most of the perimeter. Outside the fort to the north east there is a 55m long rampart and ditch with an entrance through its centre.	Iron Age	Designated	n/a	High	Setting

				The monument is of national importance as a well preserved example of a stone walled Iron Age fortification; it is of particular interest because of the existence of an outer defence work. The monument has the potential to enhance considerably our understanding of prehistoric defensive structures and settlement activity.

SM13523	12.3 - 7	Scheduled Monument	Urchany, barrow 595m SW of	The monument is a prehistoric burial monument dating probably to the 2nd millennium BC (Bronze Age). It appears to be a bowl barrow with an external ditch and bank, which is a rare form of burial monument in Scotland. The monument is a prehistoric burial monument dating probably to the 2nd millennium BC (Bronze Age). It appears to be a bowl barrow with an external ditch and bank, which is a rare form of burial monument in Scotland. The monument has an inherent potential to contribute to our understanding of the form, function and distribution of Bronze Age burial monuments, which are an important part of Highland's prehistoric landscape. The loss of this monument would significantly diminish our ability to appreciate and understand the placing of such monuments within the landscape and the meaning and importance placed on of death and burial in prehistoric times. SM4979	12.3 - 7	Scheduled Monument	Dun Mor,fort	The monument known as Dun Mor is a sub-oval fort of the Iron Age measuring c 22m NNE-SSW by 16m within a tumbled wall between 4.5m and 6.0m wide with outer and inner faces sporadically visible around most of the perimeter. The entrance is in the south east. The monument is of national importance as a well preserved example of a prehistoric fort; it is of particular interest because of the existence of additional outer defences on the most accessible sides. It has the potential to enhance considerably our understanding of prehistoric settlement and defensive structures.	Iron Age	Designated	n/a	High	Setting
SM2423	12.3 - 7	Scheduled Monument	Dun Mor,fort,Ballindoun	Prehistoric domestic and defensive: fort (includes hill and promontory fort)	Iron Age	Designated	n/a	High	Setting
SM4729	12.3 - 7	Scheduled Monument	Phoineas Hill,enclosure 900m ESE of Phoineas House	Prehistoric domestic and defensive: enclosure (domestic or defensive). The monument comprises the remains of an enclosure measuring 120m NE- SW by 80m transversely, formed by building a wall across the accessible SW approach to a promontory. The monument is of national importance as an unusual and distinctive form of enclosure, which has the potential to enhance considerably our understanding of early settlement. SM2435	12.3 - 7	Scheduled Monument	Belladrum, chambered cairns 250m NNE of Brockie's Lodge	Prehistoric ritual and funerary: chambered cairn. The monument consists of two burial cairns probably dating from the early Bronze Age (2500BC to 1500BC). The main cairn is visible as a low grassy mound about 14m in overall diameter with a kerb of boulders. The adjacent cairn lies about 25m to the north and is visible as a curvilinear bank about 25m in length and up to 1.2m high. The monument is	Bronze Age	Designated	n/a	High	Setting

				of national importance because it has inherent potential to make a significant contribution to our understanding of the past, in particular the design, construction and use of burial and ceremonial monuments. It retains its field characteristics to a marked degree; the surviving structural form of the outer kerb of the Clava-type cairn and the remains of the adjacent probable cairn are all important features. There is no record of any previous excavations, suggesting high potential for the survival of important archaeological evidence. Clava-type cairns are a regionally distinctive class of early Bronze Age monuments, and the significance of the cairn at Belladrum is enhanced by its close proximity to a second potentially earlier cairn, and also to other cairns in the area; together, these monuments are an important source of evidence of the nature of early Bronze Age belief systems, ceremonial and funerary practices, as well as society and economy. The loss of the monument would diminish our ability to appreciate the related monuments in the vicinity and, more widely, understand the meaning and importance of ceremony and ritual, death and burial in the early Bronze Age. Our understating of the placement of funerary and ceremonial monuments within the landscape during prehistory would also be diminished.					
SM4653	12.3 - 7	Scheduled Monument	Castle Spynie, broch	Prehistoric domestic and defensive: broch. The monument comprises the remains of a broch, measuring overall 19.5m in diameter within a wall measuring 4.0m wide and 1.0m high with inner and outer faces occasionally visible. The entrance is in the south west. The site is of national importance because it is a good and well preserved example of an Iron Age broch; it is of particular interest because of the survival of outer defensive works, which utilise natural rock outcrops. It has the potential to enhance considerably our understanding of Iron Age settlement and the development of brochs.	Iron Age	Designated	n/a	High	Setting

GDL00052	12.3 - 7	Garden and Designed Landscape	Beaufort Castle	Extensive 19th century landscape park, pleasure grounds and woodland walks, incorporating features from an earlier designed landscape associated with earlier Castle. The scale of the designed landscape and its dominance in the Aird/Beauly Firth , give it high Scenic value. Beaufort Castle is situated directly north of Kiltarlity, 19km (13 miles) west of Inverness and 6.4km (4 miles) south-west of Beauly. The Castle stands on a slightly elevated rise on the south side of the River Beauly with parkland extending to its south-west and east. To its east, it overlooks the junction of the Dounie Burn with the Bruiach Burn which becomes the Belladrum Burn, and issues into the Beauly. There are few views to the Castle from the surrounding landscape as woodlands and belts of trees enclose the parkland. The policies are important scenically as they contribute to the local landscape character. The landscape park extends southwards from the River Beauly to the Home Farm. Ornamental walks lead along the Bruiach Burn, southwards from the Castle to the Walled Gardens and Nursery. To the east the designed landscape extended to the East Lodge on the Kiltarlity road. Belladrum designed landscape to the south-east was contiguous with the Beauly policies (1872, O.S 6") thereby an extensive area of parkland and plantings define the eastern approach to Kiltarlity. The site is located on the south bank of the river and utilises the waterfall within the gorge; total height drop of roughly 15m. The first record of a hydro-scheme at this location is in 1898 when: "John Stirling used estate workmen to build a turbine house at the Orrin Falls and electric light was installed (in Fairburn House) in 1898. The scheme seems to have gone through several phases before being abandoned circa 1961 probably following the building of the Orrin Dam, as part of the Conon Valley Hydro scheme, in the higher reaches of the glen. MHG2748	12.4 - 7	HER	Dun Fionn	Dun Fionn, at Eilean Aigas, is a vitrified fort overlooking the Beaully river. About sixty years ago the late Lord Lovat had it explored by cutting two sections through it, which has very much destroyed its original appearance. One of the trenches was cut from east to west for a distance of 30 yards, and 2 yards wide. On the north side there is a wall from 1 to 5 feet high. The central "fort" is now difficult to identify in places but remains as a tree and bracken covered mound to the SW of the ground enclosed by the rampart to the NE. Lord Lovat's T-shaped section is still evident, with the trenches intersecting at NH 47162 42899. There is a clear encircling wall and ditch best seen on the south west corner of the "fort". These new finds included a farmhouse and enclosures, another unidentifiable building, a network of Victorian paths, five bridges, a lade and sluice, three watertanks, a network of 19th-century iron fences and gates, and several earthen forest banks. There were also a variety of other more recent or ephemeral features. Many of the paths and fences could be related to those seen on the 1st and 2nd Edition OS maps. The site also contains a derelict sheep dipper below which there is a small ancient burial ground now completely hidden beneath dense vegetation. It is said that human bones were found when the dipper was being dug. 				The promontory is defined by cliffs on the N and S and a steep slope on the E; on the W, where approach is easiest, three parallel walls have been drawn across the neck of the promontory, thus enclosing a roughly rectangular area measuring 52m from E to W by 29m transversely. The innermost wall measures about 20m in length and has collapsed to form a rubble spread up to 7m in thickness and 1.8m in height in which a line of outer facing-stones is visible 2m from the outer edge.
