

Kilmorack asset replacement project

Public information event

SSEN Transmission invite you along to the final public information event.

SSEN-T are going to be carrying out the final statutory pre-application public event for the proposed Kilmorack substation. This is part of the formal PAN (Proposal of Application Notice).

The proposed development, along with new replacement substations at Deanie, Culligran and Aigas is driven by operational requirements and asset condition assessments of the existing substations serving the hydroelectric generation assets to our transmission network.

In October of last year, we carried out the final statutory pre-application information events for Deanie and Culligran substation replacement proposals. As the proposed replacement Aigas substation site area extends to less than 2 hectares, there is no statutory obligation to carry out any public consultation for this proposal. However, SSEN-T have chosen to still undertake voluntary public consultation for this project and will be providing a follow up summary of the Aigas project, together with feedback received at the upcoming Kilmorack event.

The public event will be taking place on:

Wednesday 24 January 2024, 3-7pm

Kilmorack Hall, A831, Beauly IV4 7AG

This drop-in information event will be an opportunity to view current proposals, ask outstanding questions and find out how feedback from our previous events has been implemented into the design development. All four West of Beauly Asset Replacement applications will be submitted in Spring 2024.
