Rothienorman Transformers Delivery

Monday 24th February 2020

As part of the ongoing construction works at our Rothienorman substation site, two large 275kV Transformers will be delivered to site on the afternoon/early evening of Monday 24th February 2020. Each Transformer is significant in size and weight and as such requires transportation via police escort and specialist haulage equipment.

During the delivery period we expect there to be extremely limited access on our construction traffic route; the A920, along the B992 (Colpy straight) and the C46 road eastbound towards the substation site. A map is attached to the end of this letter.

We would encourage all local residents to plan ahead and use alternative routes where possible.
