Beauly 132kV Substation Redevelopment Virtual Consultation

SSEN Transmission invites you to come and share your views with us

Scottish and Southern Electricity Networks (SSEN) are taking forward plans to redevelop the existing 132kV Beauly substation. The project is required to enable the connection of the Loch Luichart Extension II windfarm and to allow the replacement of aging assets at Beauly 132kV substation. In lieu of being able to hold face to face public consultations in the local area, we are hosting a virtual consultation exhibition to provide greater detail about this project.

The virtual consultation event has been designed to be as interactive as face to face events, allowing for presentation of key project information and plans, as well as providing an opportunity to ask questions about the project. Visitors will be able to engage directly with the project team, via a live chat function, where they can ask any questions they might have about the project and share their feedback on the current proposals.

To find out how you can join the interactive virtual consultation visit the project website:

www.ssen-transmission.co.uk/projects/beauly-132kv-reinforcement-project

If you have any questions, please do not hesitate to contact our
Community Liaison Manager
